

	Number of patients: 40			Number of patients: 40		
	Standard therapy + SIOOT O2O3 protocol			Standard therapy		
	Initial Median Value	After 4-6 treatments with O2O3	Median Values, %	Initial Median Value	After 15 days of standard treatment	Median Values, %
Body temperature	38.7	36.5	-5%	38.6	37.9	-2%
Glycemia	300	150	-50%..	171	134	-25%
Creatinine	3.5	1.3	-60%	1.27	1.5	+15%
Leukocytes	3000	5500	+80%	6379	8354	+31%
Lymphocytes*	15	30	+100%	15.48	21.38	+40%
CRP	10	<10	-50%	7.46	5.97	-20%
D-dimer**	1300	500	-54%	1020	939	-10%

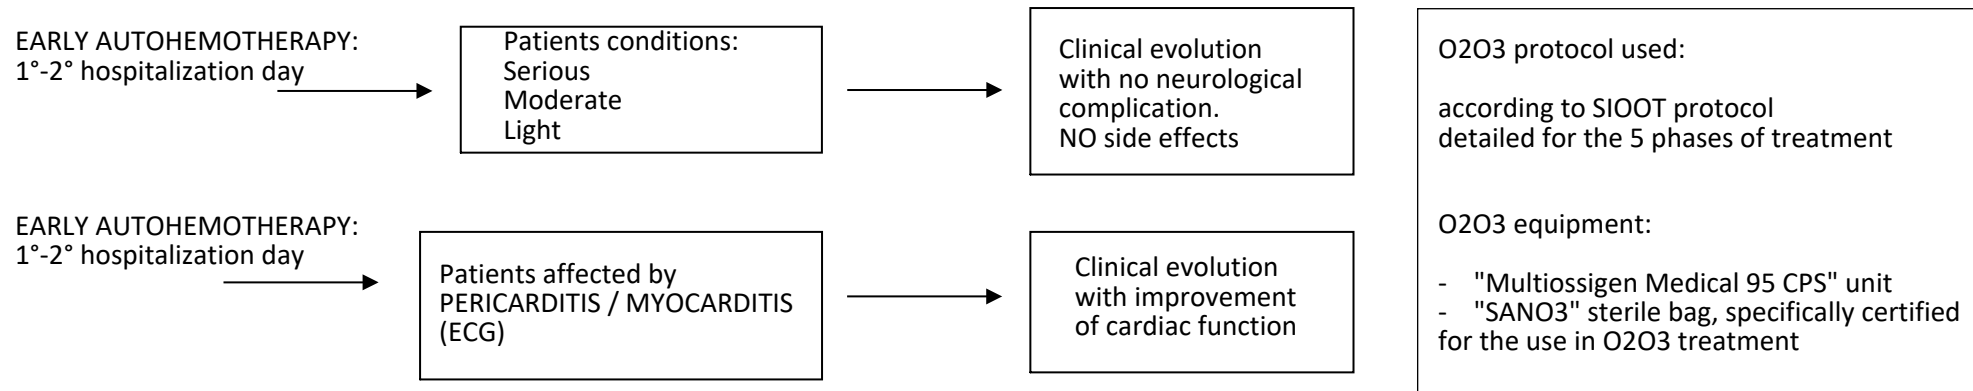

*More lymphocytes = better immune response

** They higher the D-dimer values, the higher the risk of thromboembolisms and death

Adjunctive therapy followed: according to physician's judgement

Comment:

Patients who didn't receive adjunctive Ozonotherapy recovered more slowly.***

***Much slower response time and higher occurrence of complications with metabolic syndrome (renal impairment, microthrombi formation, low-grade fever)
