

	Number of patients: 60			Number of patients: 60		
	Standard therapy + SIOOT O2O3 protocol			Standard therapy		
	Initial Median Value	After 4-6 treatments with O2O3	Median Values, %	Initial Median Value	After 15 days of standard treatment	Median Values, %
Body temperature	38,7	36,5	-5%	38,6	37,9	-2%
Glycemia	300	120	-60%	300	180	-40%
Creatinine	4	1,2	-70%	3	1,5	-50%
Leukocytes	3500	6500	+86%	3500	5500	+57%
Lymphocytes*	10	30	+200%	10	20	+100%
CRP	30	<5	-84%	30	<15	-50%
D-dimer**	5000	<750	-85%	3000	<1500	-50%

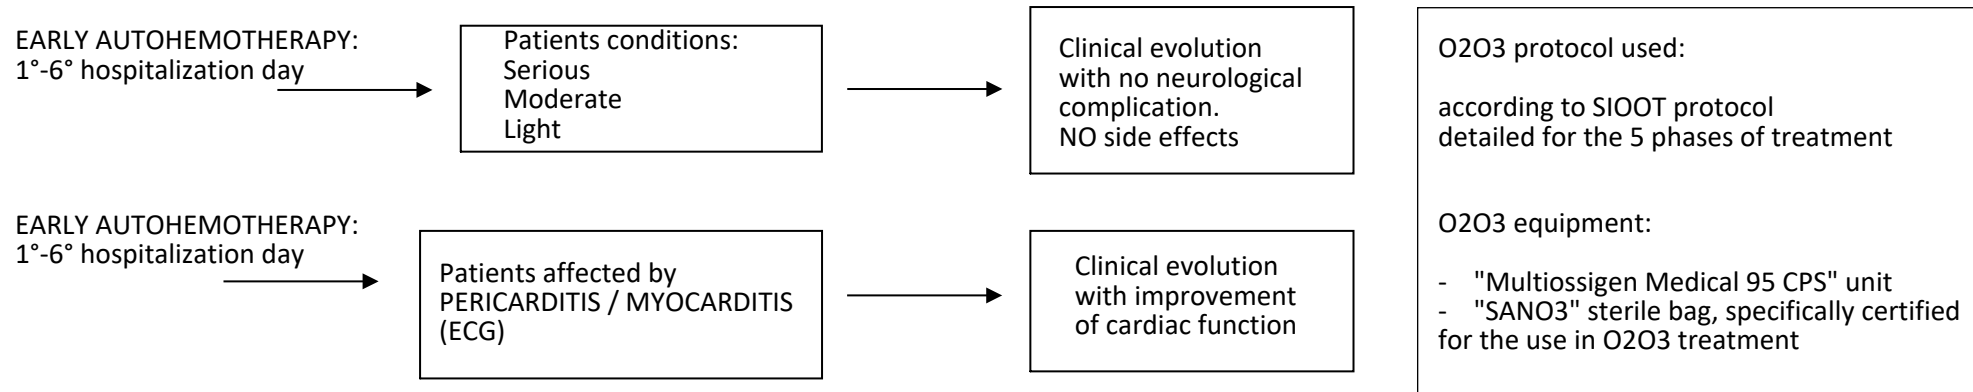

*More lymphocytes = better immune response

** They higher the D-dimer values, the higher the risk of thromboembolisms and death

Adjunctive therapy followed: according to physician's judgement

Comment:

Patients who didn't receive adjunctive Ozonotherapy recovered more slowly.***

***Much slower response time and higher occurrence of complications with metabolic syndrome (renal impairment, microthrombi formation, low-grade fever)
